Mobile Responsive View

ACTIVITY 2

Q#1

- If you want to get specific actions like forms or a short info (e.g., login, contact) - use a Modal. It maintains the user at the same page.
- If the content is longer, complex, or requires full navigation use a new page.
- Trade-off: The modals are quicker and smoother but they are not the best option when it comes to heavy content. Pages are more structured, but need to be navigable.

Q#2

- The Bootstrap grid classes (col-sm, col-md, or col-lg) allow the navbar to automatically resize itself (depending on the screen size).

It allows:

- stacked menu on mobile
- horizontal layout on desktop
- better spacing and alignment across devices

Q#3

- Custom CSS should be applied after Bootstrap for Bootstrap override.
- If Bootstrap loads last, custom design will be overwritten. If you load your CSS after, then the styles will take precedence.
